EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- Claims 2, 6-9, 15, and 19-22 have been cancelled.

Reasons for Allowance

2. Claims 3-5, 10-13, 16-18, and 23-26 are allowed.

The following is an examiner's statement of reasons for allowance:

- With regard to claims 13 and 26; as the closest reference of record, Isomura et al (US 5,729,405) shows a rotary disk storage device in Fig. 1 including: a housing 10; a rotary disk recording medium 21, the rotary disk recording medium having a data area and being rotatable about a spindle shaft supported by a bottom of the housing; a slider 22 to which a head is attached to read data from the rotary disk recording medium; a suspension assembly 23 to which the slider is attached; an actuator assembly 25+26+27 to which the suspension assembly is attached, the actuator assembly being adapted to turn about a pivot shaft 24 so that the head moves between the data area and a retraction area, the pivot shaft being supported by the bottom of the housing; and a stopper 34+etc. including an elastic member 34 (Column 5, line 12), the elastic member being cantilevered by a support rod 35 (Fig. 2) and with a magnetic material 32 (Column 5, line 13) embedded therein for attracting the actuator assembly, wherein, when any portion of the actuator assembly comes into abutment against the elastic member, the elastic member undergoes a moment of force so as to restrict an excessive movement of the actuator assembly to an inner or an outer side, and cushions the abutment; **but fails**

to show a swivel stop abutted against an outer surface of the elastic member, the swivel stop being disposed in such a position as prevents rotation of the elastic member centered on a support point of the stopper.

- Applicant asserts; “the rotary disk storage device further comprises a swivel stop abutted against an outer surface of the elastic member, the swivel stop being disposed in such a position as prevents rotation of the elastic member centered on a support point of the stopper. According to this construction, when the actuator assembly comes into abutment against the elastic member, it is possible to prevent a change in turning range of the actuator assembly caused by rotation of the stopper and consequent dislocation of the abutted position” ([0028]).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tianjie Chen whose telephone number is 571-272-7570. The examiner can normally be reached on 8:00-4:30, Mon-Fri.
